INDEX

Volume 30 Nos 1–10
January/February–December 1988

SUBJECT INDEX

A

A cooperative framework for program development 467
A new approach to cursor movements in user interfaces of integrated programming environments 535
A note on the use of z to specify flowgraph decomposition 432
A review of software testing 189
An enhanced realtime multitasking BASIC interpreter 32
An evaluation of software product metrics 177
An input/output primitive for object-oriented system 44
Artificial intelligence 146
Artificial intelligence and software engineering: a survey of possibilities 146
Attribute grammar based theorem prover 553
Attribute grammars 306, 553
Attribute grammars and dataflow computing 306
Automating information engineering 393

B

BOOKS AND PUBLICATIONS
Alexander, H Formally-based tools and techniques for human-computer dialogues 315
Baber, R L The spine of software: designing provably correct software: theory and practice 452
Beerel, A C Expert systems: strategic implications and applications 124
Bell, R Management of systems development 260
Bryant, N Managing expert systems 315
Burgess, R S Structured program design 453
Carroll, J M (ed) Interfacing thought: cognitive aspects of human-computer interaction 314
Daiper, D and Winder, R (eds) People and computers III. Proceedings of the Third Conference of the BCS HCI Specialist Group 619
Davis, K H and Domina, L Structured programming: PL/1 with PLC 617
Frank, L Database theory and practice 617
Gilb, T Principles of software engineering management 510
Goldstein, L J Turbo PASCAL: an introduction to modern programming 510
Gonzalez, M and Robbins, K PASCAL, programming, and problem solving: a systematic approach 316
Grady, R B and Caswell, D L Software metrics: establishing a company-wide program 58
Gregory, S Parallel logic programming in PARLOG: the language and its implementation 258
Grimson, W E L and Patil, R S AI in the 1980s and beyond 259
Halsall, F Data communications, computer networks and OSI 509
Harrington, J L Relational database management for microcomputers: design and implementation 316
Harris, C J and White, I (eds) Advances in command, control and communication systems 57
Hepburn, P H Further programming in PROLOG 453
IEE Software engineering standards 618
Layzell, P J and Loucopoulos, P Systems analysis and development 314
Letwin, G Inside OS/2 618
Littlewood, B (ed) Software reliability – achievement and assessment 258
Martin, J with Chapman, K K SNA: IBM's networking solution 123
Miller, W A software tools sampler 259
Perry, W E The information center 58
Ratcliff, B Software engineering: principles and methods 454
Rock-Evans, R Analysis within the systems development life-cycle. 1. Data analysis – the deliverables 123
Shapiro, A D Structured induction in expert systems 261
Sommerville, I and Morrison, R Software development with ADA 260
Sommerville, I (ed) Software engineering environments 509
Somogyi, E S and Galliers, R D Towards strategic information systems 57
Vetter, M Strategy for data modelling 124
Watt, D A, Wichmann, B A and Findlay, W ADA language and methodology 452
Buffer management 66
Buffer management algorithms for relational database management systems 66

C

CLEF – a COBOL language enhancement facility 108
COBOL 108
Command interfaces 477
Communicating with users during systems development 295
Comparison of manual and automated marking of student programs 547
Compilers 108, 299
Computer languages 32
Computer training 561
Conceptual database schema 426
Conceptual modelling 295, 587
Conceptual schema 587
Configuration 237
Configuration management 365
Congruent design 384
Constraints 595
Cooperative software development 467

D

Data 595
Data abstraction 341
Data analysis 570
Data modelling 373, 570
Data processing 12
Data structures 32, 44
Database design 426, 570
Database management systems 266
Database recovery 285
Database schemas 426
Database system 285
Databases 484
Dataflow analysis 497
Dataflow computing 306
Dataflow diagrams 515
Data-driven software design using inversion 99
Decision support systems 278
Design automation 393
Design methodologies 393
Design of relational database schemas 426
Designing software for provable correctness – the direction for quality software 331
Developing high-performance parallel software for realtime applications 218
Development life cycle 438
Development management system 237
Development methods 199
Dialogue 467
Distributed systems 443
Dynamic dataflow analysis 497

E

EDP 595
Education 5, 237
EduSET: educational software engineering tool 237
Effect of computer knowledge on user performance over time 561
Electronic data processing 595
Emeraude portable common tool

Index

environment 210
Engineering of expert systems 418
Entity-relationship-attribute models 570
Evaluating compilation systems 299
Expert system for selecting expert system shells 579
Expert systems 81, 146, 266, 278, 418, 484, 579

F
Formal methods 131, 138, 164, 189, 331, 458
Formal specification 432
Formal specification methods 438
FORTRAN-77 547
Functional languages 199
Functional programming 355

I
Improving the effectiveness of strategic decision making using an integrated decision support system 278
Information base of the Aspect integrated project support environment 365
Information modelling 570
Information systems 5, 12, 153, 587
Information systems development methodologies 458
Information systems development: current themes and future directions 458
Integrity analysis 595
Integrity analysis: methods for automating data quality assurance 595
Interpreter prototypes from language definition style specifications 23
Interpreter systems 32
Interpreters 23
Inversion 99
IPSEs 365

J
JSD 99, 199, 373
JSP 99, 153

K
Knowledge engineering 81
Knowledge-based systems 266

L
Language enhancement 108
Language extensibility 108
Life cycle 266
Logic programming 587
Logical database design 426

M
Management 237
Mapping strategies 606
Mental gymnastics of sequential programming 250
Method for the synthesis of interactive system specifications 438
Methodologies 89, 153, 295
Modelling of information needs 570
Models 12
MODULA-2 341

O
Object identity 606
Object models 606
Object space 606
Object-oriented 587
Object-oriented design 341
Object-oriented programming 44
Operating systems 66

P
Parallel architecture for functional programming 355
Parallel systems 218
Parallelism 12, 355
Practical engineering of knowledge-based systems 266
Product metrics 177
Program design 250
Program flowgraph 432
Program quality 547
Program testing 497
Programming environments 535
Programming languages 23
Programming methods 384
Prototyping 23, 131, 218, 295

Q
Quality assurance 153, 595
Query languages 228
Query reference behaviour 66

R
Random testing 402
Random testing revisited 402
Rapid implementation of SQL: a case study using YACC and LEX 228
Recursive 579
Relational database schemas 426
Relational database systems 66
Relational databases 228, 365, 426
Replay/reuse 467
Replication 443
Requirements engineering 587
RM/T 365

S
Schema design 606
Schema design and mapping strategies for persistent object models 606
Selection 579
Semantic information and consistency in distributed realtime systems 443
Sequential programming 250
Shell 579
Software design 99, 331, 384, 561
Software development 89, 189, 218, 228, 278, 285, 299, 477, 484, 561
Software engineering in MODULA-2 341
Software measurement 322
Software methodologies 418
Software metrics 177, 432
Software process model 365
Software product assurance: measurement and control 322
Software quality 322
Software quality assurance 237
Software reliability 497
Software techniques 131
Software testing 189, 402
Software tools 299, 553
Specification aspects of VDM 164
Structured analysis 458
Structured methodology 266
Structured programming 89
Structured systems analysis and design method (SSADM) 153
Syntax macros 108
System specification 138
Systems analysis 81, 153
Systems analysis techniques for the implementation of expert systems 81
Systems design 12, 438
Systems development 295

T
Teaching software engineering at university 5
Techniques for database recovery in distributed environments 285
Temporal modelling 12
The impact of software engineering 130
The modelling phase of JSD 373
The role of functional languages in software development 199
Time in information systems and its impact on modelling processes and data 12

U
Unix 77
Use of metadata to drive the interaction between database and expert systems 484
User interfaces 44, 535

V
VDM 164
Verification of conceptual schemata based on hybrid object-oriented and logic paradigm 587
Version control 365

W
What are formal methods? 131
WIMP interface for Unix 477

Y
Yourdon 515
Yourdon dataflow diagrams: a tool for disciplined requirements analysis 515

Z
Z and system specification 138
Z notation 432

Index
